Thang's Portfolio

TECHNICAL SKILLS

PROGRAMING LANGUAGE
Java, JavaScript, C#, Python

BACKEND FRAMEWORKS
Spring, Node.js, ASP .NET, Express.js, Fastify

WEB DEVELOPMENT
HTML, CSS, React, Vue, Next, Tailwind, Bootstrap

DATABASE
SQL Server, MongoDb, SQLite, MySQL, Firebase

OTHER SKILLS
Git, Problem-solving, Teamwork, Agile Methodologies, RESTful APIs, Design pattern

LANGUAGES

English: Intermediate

CERTIFICATIONS

2026
Managing an Agile Team
https://www.coursera.org/account/accomplishments/verify/WN2ME48XMA8E

2026
Agile Meets Design Thinking
https://www.coursera.org/account/accomplishments/verify/TEZT11I8OL8K

2023-2025
Funix business certificate

2022
Computer Communications
https://coursera.org/share/5d2103f79b9fb228110ab22a49001871

2023
Web Design
https://coursera.org/share/8b05247d276386ced9e1fb27478cbc58

2023
Software Development Lifecycle Specialization

LÊ MINH THẮNG

FULLSTACK DEVELOPER

BACKGROUND/CAREER OBJECTIVES

Experienced Fullstack Engineer specializing in backend systems for enterprise and large-scale platforms. Strong background in secure system, query optimization, modular system design, and cross-functional delivery across product and engineering teams. Experienced in multi-tenant environments with a focus on reliability, performance, and maintainable backend architecture.

WORK EXPERIENCE

MB BANK // 7/2026 - Now

Fullstack developer

Corporate Credit Origination & Disbursement Platform (BPM KHDN)
System Context: *Workflow-driven credit platform covering the full corporate loan lifecycle (SME, Upper-SME, CIB), from proposal and appraisal to disbursement and T24 booking.*

- Built an **automated financial-statement warning engine** that flags abnormal cash flow, receivables/payables and YoY trends across annual, quarterly and dual-method statements, cutting manual analysis for credit officers.
- Replaced hardcoded validation logic with **DMN decision tables and admin-managed configuration with kill-switches**, so business rules can be changed in production without redeployment.
- Integrated with **core banking (T24) and internal CRM** to sync proposal status across cancel/withdraw/reject flows; extended the shared integration library for disbursement and guarantee data.
- Delivered **guarantee lifecycle features** (T24 booking grouping, adjustment tracking, guarantee-letter criteria) compatible with both legacy and new data structures; resolved **pentest findings** with permission checks.
- Diagnosed production-critical defects end to end (BPMN, Oracle, Angular), including a **silent UI freeze caused by Angular change detection** on large dynamic forms.
- Authored technical designs, Jira Xray test guides and go-live checklists for each release.

Tech: Java, Spring Boot, Microservices, Angular, Oracle, Camunda BPMN/DMN, T24, GitLab CI/CD

MEDICIA // 5/2024 - 6/2026

Fullstack developer

NUHS Care Plan System
System Context: Hospital-wide care plan platform for **National University Hospital Singapore**, serving **10,000+ clinical users**.

- **Designed and developed core backend services** for managing patient care plans, treatments, medications, appointments, and symptoms in a hospital-scale system.
- **Applied Kafka-based event-driven workflows** to synchronize data across services/databases, supporting eventual consistency, reliability, and auditability in a distributed system.
- **Handled high-concurrency booking scenarios**, such as multiple users reserving the same appointment slot or medication pickup schedule, ensuring data integrity through transactional validation, locking, and conflict handling.
- **Built secure and traceable workflows** with authentication, authorization, role-based access control, and activity logging for healthcare compliance.
- **Improved performance and scalability** through service separation, SQL query optimization, reusable pagination/search abstractions, and clean REST API design.
- **Tech Stack:** Java, Spring Boot, Kafka, SQL, REST APIs, Docker, Angular

Savanna Healthcare Platform
System context: Multi-tenant telepharmacy & care management platform deployed to **3 healthcare organizations**.

- **Architected and built** a modular, healthcare platform enabling multi-organization deployment with centralized governance and tenant isolation.
- **Owned backend architecture** for telepharmacy operations, including medication orders, appointments, patient management, and treatment workflows across multiple tenants.
- **Led development of the Careplan Portal** used daily by pharmacists and healthcare staff, improving operational consistency and audit tracking across organizations.
- **Improved scalability and performance** by introducing Redis caching for high-read datasets, reducing backend load and improving API responsiveness.
- **Containerized backend services with Docker**, enabling consistent deployments and faster onboarding of new partner organizations.
- **Collaborated cross-functionally** with product managers, healthcare stakeholders, and engineers to deliver scalable backend systems for complex healthcare workflows.
- **Tech stack:** Node.js (Fastify), Vue.js, Redis, Docker, SQL, AWS

VNPT-IT // 6/2023 - 4/2024

Fresher Java Backend Developer

https://coursera.org/share/c70a8b9308f0ecd6d345860e3e4a37b2

2024

Academic English: Writing
https://coursera.org/share/d14f1d9a8e3d6d982113f62e2e1d3a8e

2024

Project Management Principles and Practices Specialization
https://coursera.org/share/e65df82224a67bb2616c8e763785974b

AWARDS AND ACHIEVEMENTS

2024 Top 10 Finalist – VPBank Technology Hackathon 2025

2023 [TECHCOMBANK] Scholarship for best project

2022 Academic Scholarship – FPT University

Hospital Management Information System (HMIS)
System context: National-scale Hospital Management Information System **deployed across all hospitals and local health stations nationwide**.

- **Engineered core backend modules** for a large-scale HMIS using Spring Framework and Oracle, supporting day-to-day clinical and administrative operations.
- **Built the Pharmacy module** to manage pharmaceutical inventory, prescriptions, and drug dispensing workflows at scale.
- **Implemented the Vaccination module** to track immunization records and schedules, supporting longitudinal patient history.
- **Ensured system stability and performance** by maintaining legacy components and optimizing SQL queries for high-volume transactional workloads.

Tech stack: Java, Spring Framework, Oracle, Jquery

EDUCATION

FPT UNIVERSITY // **2021** - **2025**

Software Engineering

GPA: 3.0/4

FSB INSTITUTE OF MANAGEMENT & TECHNOLOGY // **2025** - **NOW**

Master of Software Engineering

PERSONAL PROJECTS

Viet Nam AI Store // **3/2026** - **4/2026**

Role: Fullstack Developer

Link Website: https://vietnamai.store
Description:
Delivered a production-ready AI chatbot commerce platform for a real client in Vietnam, covering both customer-facing sales pages and internal operations. Built the solution with Next.js, TypeScript, Tailwind CSS, and Supabase, including product catalog management, order tracking, role-based admin/staff access, authentication, and attendance workflows. Implemented secure API patterns, database policies, and media storage for reliable day-to-day business use. Optimized UX for lead conversion with responsive design, clear CTAs, and fast page performance. Deployed and configured the system on Vercel with environment-based security, then supported handover and live usage for the client's team.
Techstack: Next.js, TypeScript, TailwindCSS, Supabase, CI/CD

SPORTS COURT BOOKING AND MANAGEMENT SYSTEM // **12/2024** - **3/2025**

Role: Leader

Link Github: https://github.com/SCRMS-FPT
Description:
Developed a Sports Court Booking and Management System for players and court owner to book courts, manage courts, find coaches, and manage match pairings. Integrated features for court owners to handle bookings, payments, and reports. Built with ASP.NET 8, PostgreSQL, Redis, and CQRS for scalability and performance.
Techstack: Microservices ASP.NET 8, PostgreSQL, Redis, RabbitMQ, Docker, OAuth2, CQRS, Vertical Slice Architecture, Clean Architecture
