TECHNICAL SKILLS

PROGRAMING LANGUAGE
C#, Java, JavaScript, Python

BACKEND FRAMEWORKS
ASP .NET, Spring, Node.js, Express.js, Fastify

WEB DEVELOPMENT
HTML, CSS, React, Tailwind, Bootstrap

DATABASE
SQL Server, MongoDb, SQLite, MySQL, Firebase

OTHER SKILLS
Git, Problem-solving, Teamwork, Agile Methodologies, RESTful APIs, Design pattern

LANGUAGE
English

CERTIFICATIONS

2023-2025
Funix business certificate

2022
Computer Communications
https://coursera.org/share/5d2103f79b9fb228110ab22a49001871

2023
Web Design
https://coursera.org/share/8b05247d276386ced9e1fb27478cbc58

2023
Software Development Lifecycle Specialization
https://coursera.org/share/c70a8b9308f0ecd6d345860e3e4a37b2

2024
Academic English: Writing
https://coursera.org/share/d14f1d9a8e3d6d982113f62e2e1d3a8e

2024
Project Management Principles and Practices Specialization
https://coursera.org/share/e65df82224a67bb2616c8e763785974b

LANGUAGES

- English: Intermediate (Good proficiency in reading, writing, and listening)

AWARDS AND ACHIEVEMENTS

2024 Top 10 Finalist – VPBank Technology Hackathon 2025

2023 [TECHCOMBANK] Scholarship for best project

2022 Academic Scholarship – FPT University

BACKGROUND/CAREER OBJECTIVES

Backend Developer with 2 year of Java experience; proficient in Spring, Node.js, ASP.NET and React. Skilled at architecting and delivering scalable, high-performance systems, solving complex problems and optimizing workflows through clean, efficient code. Eager to join a dynamic team and drive business impact from day one.

WORK EXPERIENCE

MEDICIA // 1/2025 - Now

Fullstack developer

NUHS Care Plan System
System context: Hospital-wide care plan platform for **National University Hospital Singapore**, serving **1,000+ clinical users**.

- **Designed and built core backend services** for a hospital-scale care plan system enabling clinicians to manage patient treatments, medications, appointments, and symptoms.
- **Solved complex system integration challenges** between hospital EMR systems, internal admin portals, and patient-facing PWA through modular Spring Boot microservices and standardized data contracts.
- **Implemented secure and auditable workflows**, including authentication, authorization, and activity logging, to meet healthcare compliance and traceability requirements.
- **Improved performance and scalability** via service separation, query optimization, and reusable pagination/search abstractions, supporting thousands of daily clinical operations.
- **Enabled faster clinical workflows and improved UX** by delivering reliable APIs for real-time patient data access, reducing manual handling and operational friction for medical staff.
- **Tech stack:** Java, Spring Boot, Microservices, SQL, REST APIs

Savanna Healthcare Platform
System context: Multi-tenant telepharmacy & care management platform deployed to 3 healthcare organizations.

- **Architected and built** a modular, healthcare platform enabling multi-organization deployment with centralized governance and tenant isolation.
- **Designed backend APIs and core workflows** for telepharmacy operations, covering medication orders, dispensing, patient profiles, appointments, symptoms, and treatment content.
- **Led development of the Careplan Portal**, the operational backbone for pharmacists and healthcare staff, ensuring consistency, auditability, and regulatory alignment across tenants.
- **Built patient-facing applications** (Savanna, Haven, Tracker) supporting medication adherence, reminders, pickup scheduling, and symptom tracking to enable continuous care outside clinics.
- **Improved scalability and performance** by introducing Redis caching for high-read datasets, reducing backend load and improving API responsiveness.
- **Containerized backend services with Docker**, enabling consistent deployments and faster onboarding of new partner organizations.
- **Collaborated cross-functionally** with product managers, healthcare stakeholders, and engineers to translate complex domain requirements into maintainable system designs.
- **Tech stack:** Node.js (Fastify), Vue.js, Redis, Docker, SQL

VNPT-IT // 6/2023 - 6/2024

Fresher Java Backend Developer

Hospital Management Information System (HMIS)
System context: National-scale Hospital Management Information System **deployed across all hospitals and local health stations nationwide**.

- **Engineered core backend modules** for a large-scale HMIS using Spring Framework and Oracle, supporting day-to-day clinical and administrative operations.
- **Built the Pharmacy module** to manage pharmaceutical inventory, prescriptions, and drug dispensing workflows at scale.
- **Implemented the Vaccination module** to track immunization records and schedules, supporting longitudinal patient history.
- **Ensured system stability and performance** by maintaining legacy components and optimizing SQL queries for high-volume transactional workloads.

Tech stack: Java, Spring Framework, Oracle, SQL

EDUCATION

FPT UNIVERSITY // 2021 - 2025

Software Engineering

GPA: 3.0/4

FUNIX // 2023 - 2025

Funix business certificate

GPA: 8.25/10

PERSONAL PROJECTS

SPORTS COURT BOOKING AND MANAGEMENT SYSTEM // 12/2024 - 3/2025

Leader

Link Github: https://github.com/SCRMS-FPT
Team size: 5
Description:
Developed a Sports Court Booking and Management System for players and court owner to book courts, manage courts, find coaches, and manage match pairings. Integrated features for court owners to handle bookings, payments, and reports. Built with ASP.NET 8, PostgreSQL, Redis, and CQRS for scalability and performance.
Microservices ASP.NET 8, PostgreSQL, Redis, RabbitMQ, Docker, OAuth2, CQRS, Vertical Slice Architecture, Clean Architecture

E-COMMERCE PLATFORM // 10/2024 - 11/2024

Leader

Link Github: https://github.com/thanhhdhe/ProjectPRN231.git
Team size: 2
Description:
Developed a feature-rich e-commerce website that allows users to manage products, place orders, and make payments while ensuring a seamless and secure shopping experience.
Asp.net 6,Restful API, Clean Architecture, CQRS, Reactjs,Microsoft SQL Server

REAL-TIME E-COMMERCE WEBSITE // 11/2024 - 12/2024

Fullstack developer

Link Github: https://lethangd.github.io/admin_asm3njs/ https://lethangd.github.io/client_asm3njs/ https://github.com/lethangd/be_asm3njs.git
Team size: 1
Description:
Developed a real-time e-commerce website with features such as live updates for product availability, cart modifications, and order status changes using Socket.io for real-time communication.
Node.js, React, Expressjs, Rest API, Socket.io, Mongodb
